

## Flow Diagram No2: Cluster

1. Remediation strategy developed following the desk top study, Conceptual Site Model, appropriate risk assessment and appraisal of options
2. Include contingency procedures / revise as appropriate throughout process)
3. Must be able to demonstrate certainty of use along green lines. If the use becomes uncertain material remains waste and will be required to be removed from site or used under an appropriate waste permit on site
4. For removal from site you will need to consider and comply with waste acceptance criteria, pre-treatment requirements for landfill disposal and acceptance criteria of any other authorised waste facility
5. In removing waste that is classified as hazardous waste the premises of production will need to be registered with the EA
